

Cuts film strips in exactly the same size for test purposes

The Aerne Analytic Foil Cutter is used to cut film strips in exactly the same sizes. The strips are necessary in the quality assurance in film manufacturing. By means of for example tensile tests the suitability can with the help of a stress-strain diagram be analysed and determined. The cutter works

with a ball bearing slide and its hardened cutting blades can be used multiple by reversing them. The Foil Cutter is produced in serial-production to cut four, five or six films with a width of 15mm and a length of 200mm.
