

Available with digital or analogue pressure gauge

The Vacuum Tester is established to test nearly all packagings under vacuum. The Aerne Analytic Vacuum Tester VT 350D is developed with a digital or analogue pressure gauge and an automatic ventilation. This random analysis is exactly what the today's quality standards in the packaging industry require. This user-friendly device is perfect for laboratory use because the surface can be

cleaned sterile. The pressure stability assures with its special drafted and well-ried components. To use with different packaging sizes there are a multitude of Vacuum Testers in the Aerne Analytic range of products. Custom-made Vacuum Testers that have customised specifications are possible to produce by Aerne Analytic as well.
