Syringe Warmer

Application:

The Aerne Analytic Syringe Warmer is applied to warm up syringes filled with baby food, medicine, etc. to a preset temperature quickly. The device is optional available with a timer. The set temperature can be programmed to values up to 75°C. The Syringe Warmer is available for a multitude of syringe types and sizes. Through the constant warming and the pre-installed adjustments the handling is easy and the daily routine in laboratories and medical practices is a relief. Syringes can be tempered exactly and be used without another checkup. The device can also be produced customized for other types of syringes or temperatures.
